NOTE :—The following is an example of the method of interpreting this table :—According to the Australian experience for the decennium 1881–90, out of each 1000 males who reached age 30, the number who, on the average, died before reaching age 31 was 8.67. The corresponding numbers for the experience of 1891–1900, and 1901–10 were 6.98 and 5.19 respectively.

89.—NUMBERS WHO SURVIVE EACH AGE OUT OF 100,000 OF EACH SEX AT BIRTH, ACCORDING TO THE COMMONWEALTH MORTALITY EXPERIENCE FOR EACH OF THE DECENNIA 1881–90, 1891–1900 AND 1901–10.

NOTE :—The following is an example of the method of interpreting this table :—If the rates of mortality experienced in Australia during the decennium 1881-90 remained in operation throughout the lifetime of a group of males who numbered 100,000 at birth, the number surviving at age 30 would be 70,531. The corresponding numbers for the experience of 1891-1900, and 1901-10 are 75,706 and 80,844 respectively.

NOTE :—The following is an example of the method of interpreting this table :—If the rates of mortality experienced in Australia during the decennium 1881-90 had remained in operation throughout the life-time of any group of males, the average period beyond age 30 lived by each of those who reached age 30 would have been 33.642 years. The corresponding figures for the experience of 1891-1900 and 1901-10 are 35.110, and 36.520 respectively.

SECTION 15.—LOCALITIES, POPULATION, AND OCCUPIED DWELLINGS.

NOTE.—The figures given in this Section refer to the localities specified, as defined by the residents therein. It must be understood that no clearly defined boundaries exist in these cases, and the population given for any locality represents the number of persons who returned themselves and their dwellings as belonging to that locality. For population within Municipal boundaries in the several States see Section 14.
